

Sierra – Sacramento Valley EMS Agency Program Policy

EMS Aircraft Utilization

	Effective: 06/01/2016	Next Review: 01/2019	862
	Approval: Troy M. Falck, MD – Medical Director		SIGNATURE ON FILE
	Approval: Victoria Pinette – Executive Director		SIGNATURE ON FILE

PURPOSE:

To identify appropriate and consistent criteria for requesting/utilizing EMS aircraft for prehospital patient care and transport.

AUTHORITY:

- A. California Health and Safety Code, Division 2.5, § 1797.218, 1797.220, 1798.2, 1798.170, 1798.172, 1798.200, and 1798.206.
- B. California Code of Regulations, Title 22, Division 9, Chapter 8, § 100276 – 100306.
- C. California Code of Regulations, Title 22, Chapter 12, § 100400, 100402.
- D. Prehospital EMS Aircraft Guidelines, EMSA Document #144, December 2010.

POLICY:

- A. It is important that EMS personnel utilize consistent and appropriate criteria when requesting an EMS aircraft for assistance with patient care and transport.
- B. A patient being transported by EMS aircraft should be critically ill and/or injured (life or limb). Special circumstances related to a particular area will drive decisions related to EMS aircraft utilization.
- C. Utilization should be based upon the time closest/most appropriate level of care.
- D. Time savings will be influenced by a number of factors, including but not limited to, a patient's condition, the type of aircraft and current environmental conditions.
- E. The use of EMS aircraft should provide a significant reduction in arrival time to a receiving facility capable of providing definitive care, including designated specialty care centers. If the total estimated receiving facility arrival time for EMS aircraft exceeds the ground ambulance use, air transport should not be used.

F. Utilization of EMS aircraft should be considered in the following situations:

1. Patients who meet trauma triage criteria.
2. Time critical medical patients.
3. MCI.
4. The patient is inaccessible by any other means.
5. Utilization of existing ground transport services threatens to overwhelm the local EMS system.
6. When additional or specialty care provider resources are needed.

G. The decision to cancel a responding EMS aircraft is the discretion of the Incident Commander. The decision should be made collaboratively with on-scene medical personnel, after assessing the scene location and patient needs.

H. The pilot shall have the final authority in decisions to continue or cancel the response. The pilot in command may also dictate the need to deviate from destination policy.

I. EMS aircraft transportation should not be used for the following patients:

1. CPR in progress.
2. Patient(s) contaminated by hazardous materials that cannot be completely decontaminated prior to transport.
3. Patient(s) who are potentially violent or have behavioral emergencies. However, a patient may be transported at the discretion of the flight crew.
